

Bed cultivation

Light tillage of pre-made beds provides rolling soil action in front of shaper pan. This levels and firms bed tops to finish primary beds. Also cultivate and re-shape beds before planting to smother/bury starting weeds.

Cultivate the entire bed, including furrows. Furrow shanks - or other attachments - also work bed sides and furrows at the same time for weed control, soil aeration or to relieve soil compaction, which also improves water penetration.

Whole solutions for wholesale growers

Rear furrow plates are also made-to-order for needed bed top and shape of furrow.

Add re-shaper brackets and shaper pan sections for row crop cultivation on raised beds.

Equip bed shaper with S-tines for light tillage of pre-made beds.

Full-width pans for dedicated purposes.

Drip tape application

Options

Use GPS for row alignment or add hydraulic markers. Markers feature an automatic sequence valve, which uses one hydraulic outlet. All hoses included.

Our full line of premium Drip Tape Applicators offer many choices for drip tape placement before or after planting. Roll supports include automatic roll brake.
