

Models 3101 and 3201 are Disk Bedders for 25 to 50 PTO-HP tractors that can bite into the best bed shaping practices on a small-farm scale. "Junior" Model 1701 is scaled down for narrower tractors and row systems. The simple, rugged design is most durable, even in rocky soil.

Bed Shaping 101

The single-toolbar 3101 is basic. With little practice, operators can quickly gauge cutting depth with the tractor hitch. Bed height depends on depth of cut. The double-toolbar 3201 features gauge wheels for drop-and-go depth control.

3101

3201

**Adjustable
on toolbar**

**1-1/2" round
arbor**

**Two sealed ball bearings
4" wide housing**

Horsepower requirement

If tractor drawbar can clear the bed height and wheel spacing straddles the bed width, it also has enough power to use in loose soil. Pull is harder with added weight to penetrate harder ground.

The 2nd toolbar and gauge wheels can be valued to set-up other equipment. Multi-Tool Kits are available to set-up a Chisel Plow, Ripper or Bed Lifter.

Models 3101 and 3201

- 50 PTO-HP rating
- Category-1 or 2 hitch
- Four 22" disks on two gangs
- Model 3101 features a single 3" square toolbar, 84" wide
- Model 3201 features double 3" square toolbars, 84" wide, with gauge wheels for depth control
- Adjustable 54-72" bed C-C width

Model 1701

- Category-1 hitch
- Four 18" disks
- 3" square toolbar, 72" wide
- Adjustable 48-60" bed C-C width

**Junior
1701**
