Seedbed / Secondary Tillage

This popular cultivator finishes a seedbed in soil with minimal residue. Deeper primary tillage is essential if forming raised beds afterward. Mix-in light to moderate weed growth. The Leveling Bar levels ridges from tines before Rolling Basket firms. This set-up is typically dedicated for secondary tillage and can also be used for weed control around field perimeters and pathways.

Flat-Bed Row Crop Cultivation

FURROW SHANKS

CROP SHIELDS

S-tines are effective for mid-to-late cultivation and durable in rocks. Add row crop shields or utilize Beet Knives or Tender Hoes to cultivate up close to the row. Upgrade to heavier Furrow Shanks to loosen compacted wheel tracks.

Stale Bed Cultivation

Help control weeds on beds with shallow tillage.
