

Finish primary beds
Re-work stale beds

Bed shaper equipped with tillage attachments

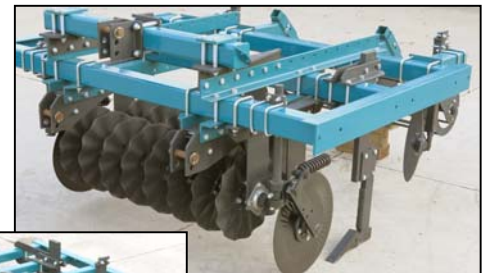

Bed Shapers are also fitted with S-tines. A 4-bar toolbar frame provides more clearance between tines. Loosen the top layer of soil on primary beds for the shaper pan to flatten and re-firm bed top with squared shoulders. Retain natural moisture for best tillage and planting without over-working soil. This can provide the finest seedbed in many medium-to-heavy soil types. Also re-work stale beds with little soil turnover or simply control weeds as beds wait for planting. Tillage depth is adjustable.

Apply drip tape and/or mark plant locations at final stage of bed conditioning. Bed shaper can also work over-top buried drip tape already in place

5500 Bed Reconditioner

4460-84RB Toolbar Cultivator

Other raised bed equipment handles moderate to heavy residue conditions. Heavy shanks also loosen compacted furrows.
