

MULTI-USE TOOLBAR

Simple field equipment for homesteads or hobby farms

1-shank ripper

1002-54

A variety of attachments mechanizes the small farm with minimal investment

The universal toolbar utilizes many tools to make quick work of many jobs. Small farms need mechanization all the same and this is versatile, rugged, farm-quality equipment. Some items bolt on the 2" square toolbars. Others quickly mount to any of the three receiver brackets.

Hilling & Ridging

Loosen plastic mulch

Puncher wheels for planting

Drip Tape Application

GARDEN EQUIPMENT PRIMER

RIPPERS, FURROWERS & PLOWS

20 to 25 HP can pull one or two ripper shanks, chisel shanks or plow shares. A third ripper or chisel shank may depend on hardness of soil to start with. Furrowers tend to be used in pre-tilled soil. We have chisel plows but shanks are a bit tall for sub-compact tractors to lift off the ground.

With tractors this size fewer shanks enables comparable tillage depth. Or depth is sacrificed to let the tractor pull what it can, which may matter less on a small plot of lighter

soil or when a small tractor isn't compacting the soil as much. To work with residue, alternate the use of a disk harrow or roto-tiller with deep tillage tools to achieve big-machine results.

Variations in tractor weight, tires, soil moisture and soil hardness affects equipment performance. Weight may need to be added to tractor for best traction. Let field dry to best moisture content for soil fracture and crumbling.
